1 Lab Introduction

1.1 Workplace Assistant Overview

Workplace Assistant is an AI-powered conversational assistant built to work alongside you, enabling smarter interactions and more efficient work completion. The Assistant has an extensive understanding of natural-language commands, contextual summarization, and dynamic task performance to boost productivity, streamline operations, and accelerate decision-making across teams. Workplace Assistant enables intelligent, context-aware interactions with Business Automation Workflow and offers the following advantages.

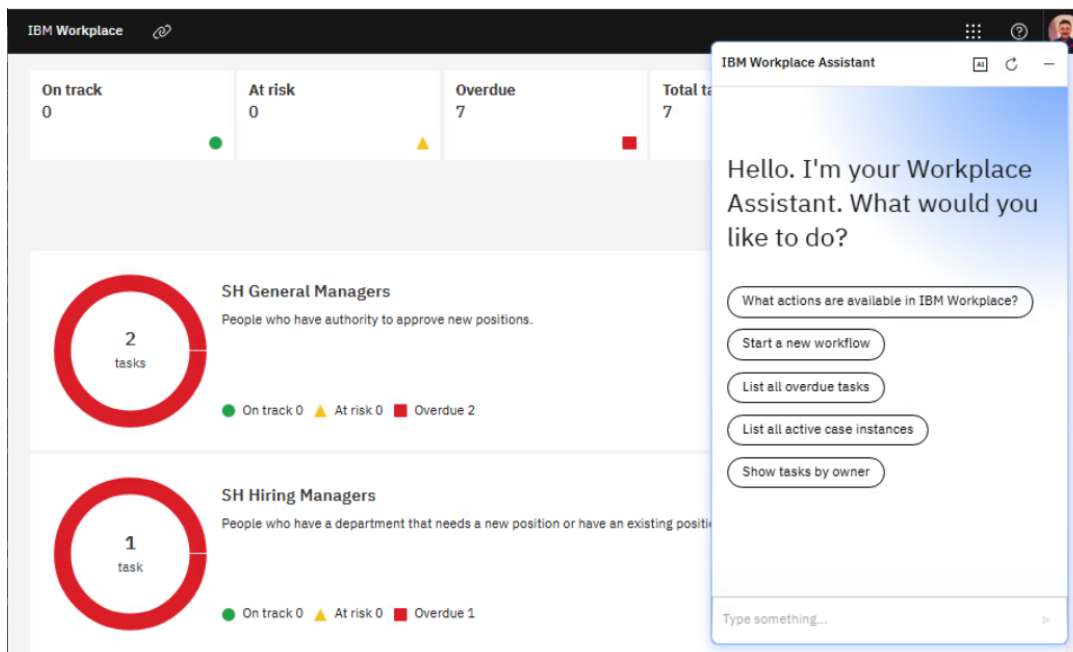

Figure 1. IBM Workplace Assistant in IBM Workplace.

Intent-driven, multi-step action execution

The Assistant goes beyond simple questions-and-answers or mapping prompts to predefined actions. It can interpret complex natural language commands, retrieve contextually relevant information, and execute multi-step actions with minimal input. For example, it can update task due dates, adjust priorities, or reassign multiple tasks in bulk from a single prompt. Its agent-based design enables sequenced actions that are driven by user intent.

Contextual insights for informed decisions

The Assistant consolidates information and provides contextual summaries of tasks, workflows, and cases, drawing insights to help you make faster, more informed decisions.

Workflow and task summarization

Workplace Assistant summarizes workflows and tasks, giving you immediate access to consolidated key data. Workflow summaries include data such as description, name, ID, status, due date, number and status of tasks, and business data. Task summaries include data such as ID, display name, description, owner, priority, due time, process instance name, team, originator, completion time, and business data. Accessing workflow and task data summaries makes managing work faster, clearer, and more collaborative with the following key features:

- Context awareness: You understand key details of workflows and tasks with clarity, without opening each one individually.
- Faster decision-making: Summaries highlight key data points, enabling you to act promptly.
- Reduced navigation effort: Consolidated information minimizes the need to switch between views or drill down into details.

- Enhanced accuracy: Clear summaries reduce the risk of overlooking important information, improving Task and workflow management.
- Better collaboration: Shared summaries provide team members with consistent and concise insights.

Case summarization

Workplace Assistant also summarizes cases with dependencies, relationships, and status, providing clarity and context for decision-making. If you inherited ongoing cases with insufficient context or handover, the summarization and discovery features help quickly understand the case history, which is essential for making informed decisions. You no longer have to open cases manually and review their content to gain insights. Workplace Assistant addresses these challenges with the following case-centric features:

- Defines key events in a case lifecycle that are critical to business processes. Events such as approvals, escalations, or status changes serve as input for summarization.
- Generates dynamic, human-readable summaries based on defined events. Summaries provide a concise timeline of the case progression.
- Provides access to summaries directly from the case list view, which enables users to preview case histories without opening individual cases.

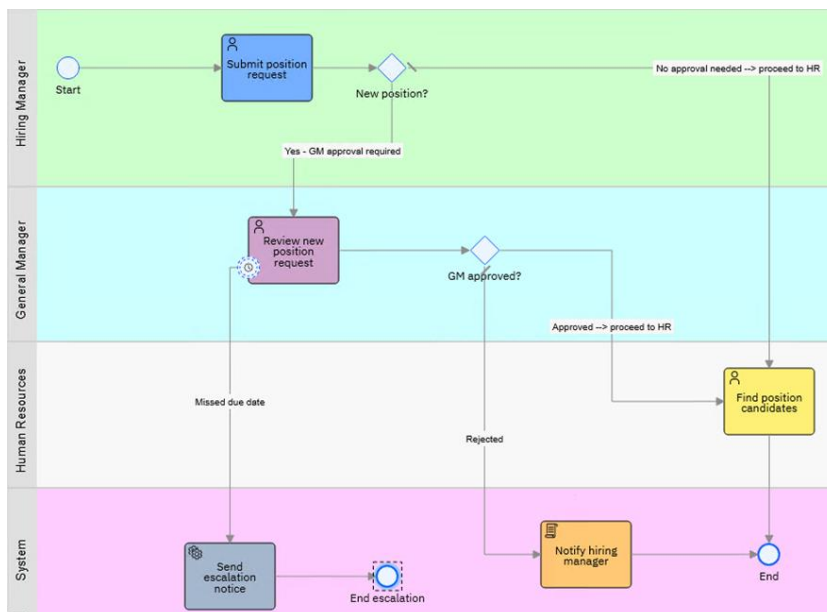

1.2 Lab Scenario Introduction

1.2.1 Smart Hire Process

Focus Corp is a business services provider offering a range of services for various industries. Recently, Focus Corp automated their HR Talent Acquisition by implementing a "Smart Hire" process.

1.2.2 Using Workplace Assistant for the Smart Hire Process

In this lab, you will work with instances of the Smart Hire Process using IBM Workplace and the AI Assistant, a new AI feature added to IBM Workplace in version 25.0.0 with major enhancements in version 25.0.1.

Specifically, you will explore three features of the IBM Workplace Assistant: **Team actions**, **Task actions**, and **Start actions**.

Note that we have created several instances of the process and completed some tasks to populate your task list for the purpose of this lab.

1.3 Lab Setup Instructions

If you are performing this lab as a part of an **IBM event**:

- Access the document that lists the available systems and URLs along with login instructions. For this lab, you will need to access **IBM Business Automation Workplace**.

If you are performing this lab as a **self-paced** lab in a Client Onboarding enabled environment:

- Find the URL for **IBM Workplace** and user information in the **ConfigMap “000-client-onboarding-information”** of the IBM Cloud Pack for Automation project in the OpenShift Web Console. It is recommended to perform the lab using one of the users, `usrXXX`.

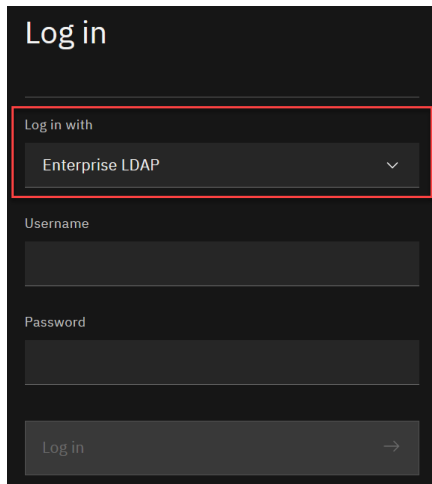

CP4BA Demos and Labs 2026 for CP4BA 25.0.1

Page 6 of 19

2 Lab Instructions

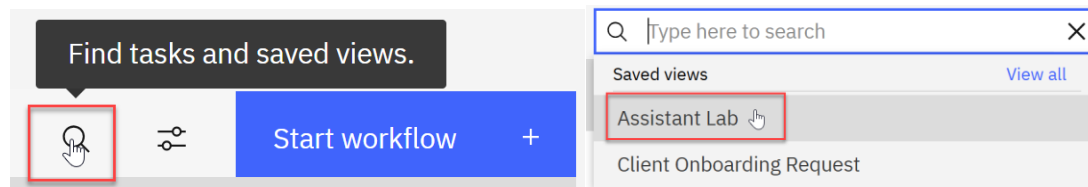

2.1 Open Workplace and Launch the Assistant

_1. In your browser, **login** to **IBM Workplace** using the **Enterprise LDAP** option.

The image shows the IBM Workplace login interface. At the top, it says "Log in". Below that is a "Log in with" dropdown menu where "Enterprise LDAP" is selected and highlighted with a red box. Underneath are fields for "Username" and "Password", followed by a "Log in" button with a right-pointing arrow.

As your environment may be used for different purposes, it contains a larger number of tasks from various solutions. For this lab we are only interested in those tasks that originate from the Smart Hire solution.

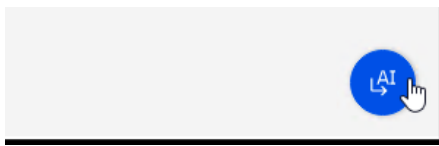

_2. **Click** on the **magnifying glass** icon next to the blue Start workflow button and **select** the Saved view **Assistant Lab**.

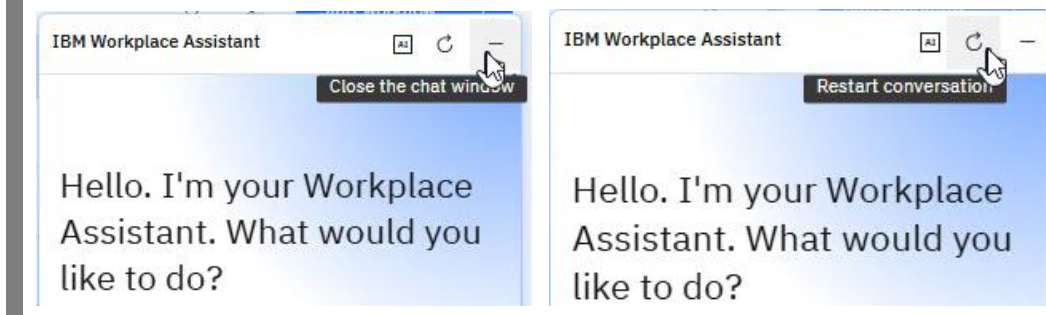

You should now only see the seven user tasks that belong to the Smart Hire solution that we are interested in (the order and the due dates may differ).

☐	Tracking status	Priority	Name	Due on
▼ ☐	■ Overdue	Normal	Task: GM Approval	Jul 1, 2025, 10:12:00 PM
▼ ☐	On track	Normal	Task: Find job candidates	Jul 2, 2027, 12:13:00 AM
▼ ☐	On track	Normal	Task: Create position request	Jul 2, 2027, 12:13:00 AM
▼ ☐	On track	Normal	Task: Find job candidates	Jul 2, 2027, 12:13:00 AM
▼ ☐	On track	Normal	Task: Find job candidates	Jul 2, 2027, 12:13:00 AM
▼ ☐	On track	High	Task: Find job candidates	Jul 2, 2027, 12:13:00 AM
▼ ☐	On track	Very high	Task: GM Approval	Jul 2, 2027, 12:13:00 AM

3. Click the **IBM Workplace Assistant** icon in the lower right corner to open the Workplace Assistant.

You can minimize the chat window or restart the conversation (clear context).

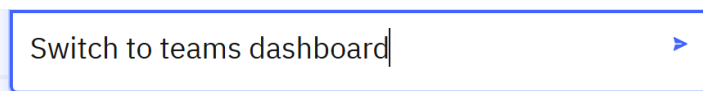

2.2 Team Actions

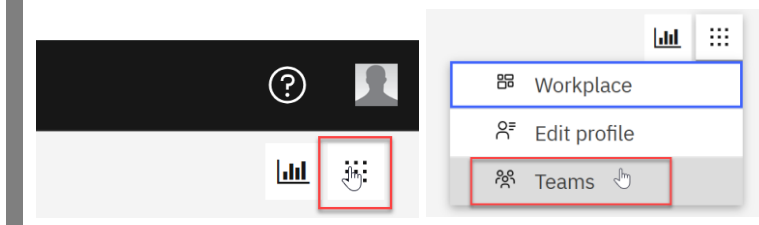

As a team manager, you can use the Assistant to view all the teams that you manage and also understand and manage their workload.

2.2.1 Open the Team Dashboard

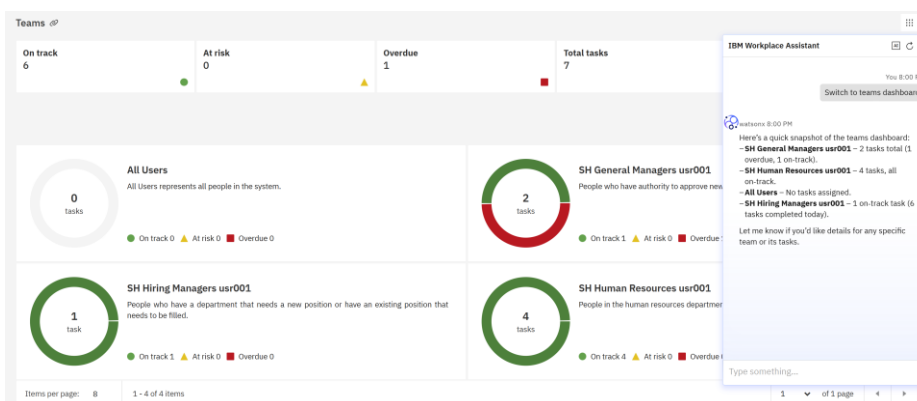

4. In the Assistant's prompt, **type/copy-paste** the text **Switch to teams dashboard** and **press Enter**.

Alternatively, click the dashboard selection icon in the top right corner, followed by Teams.

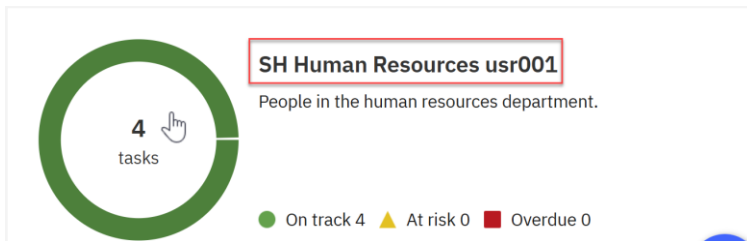

5. Note that your user manages three teams (SH General Managers, SH Hiring Managers, and SH Human Resources). The Teams view displays the task counts and their statuses for each of these three teams.

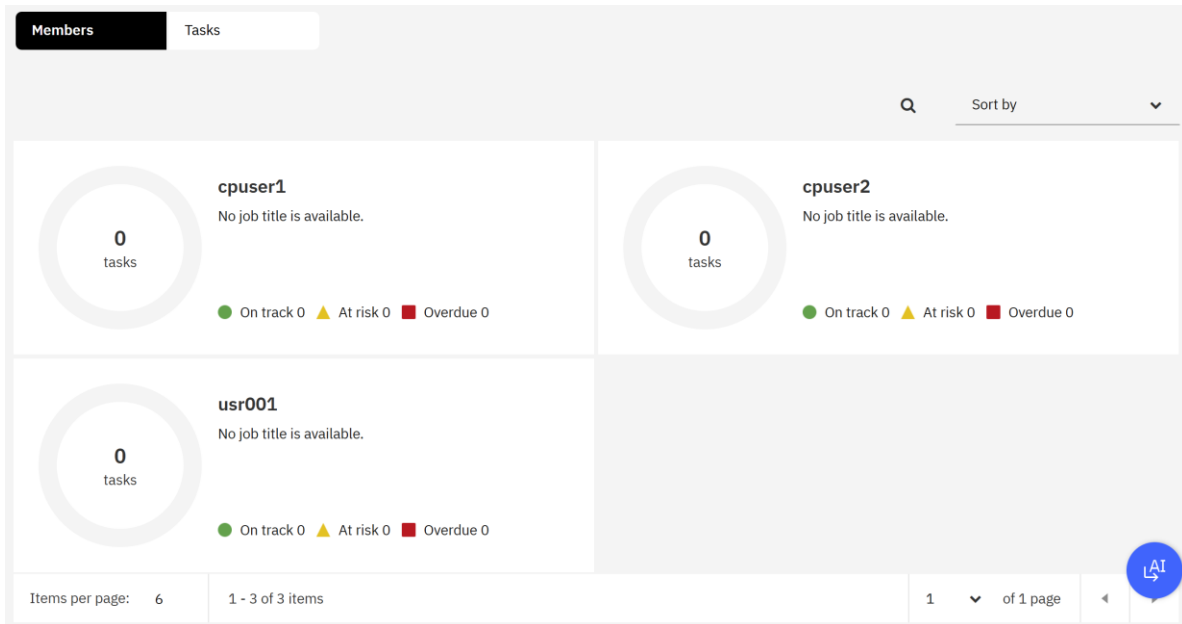

The name of the user you are using is appended to the base team names.

2.2.2 Select a Team

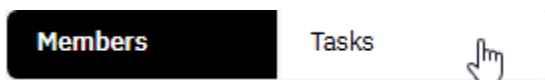

_6. Select the **SH Human Resources** team.

_7. **Observe** that currently, none of the three users in the team own one of the four tasks.

_8. Click the **Tasks** button.

Note that the tasks for the SH Human Resources team **have no owner** which is in-line with the task count on the Members page.

Teams / SH Human Resources usr001

On track	At risk	Overdue	Total tasks
4	0	0	4

Tracking status	Priority	Name	Due on	Owner
On track	Normal	Task: Find job candidates	Jul 2, 2027, 12:13:00 AM	
On track	Normal	Task: Find job candidates	Jul 2, 2027, 12:13:00 AM	
On track	Normal	Task: Find job candidates	Jul 2, 2027, 12:13:00 AM	
On track	High	Task: Find job candidates	Jul 2, 2027, 12:13:00 AM	

The table displays the tasks for the 'SH Human Resources usr001' team. The first table shows the summary: 4 On track, 0 At risk, 0 Overdue, and 4 Total tasks. The second table shows the list of tasks, all of which are 'On track' and have a due date of 'Jul 2, 2027, 12:13:00 AM'. The 'Owner' column is empty for all tasks, indicating that no user owns any of the tasks.

2.2.3 Ask the Assistant to Assign Tasks to Your User

_9. Click the **checkbox** on the **title bar** of the Tasks table to select all tasks.

	Tracking status	Priority	Name
▼	☐ On track	Normal	Task: Find job candidates

Note that all tasks are now selected, and the prompt for multiple tasks selected appears in the Assistant.

The Assistant understands that multiple tasks are selected and provides actions you could select in the “Available actions for the selected task(s)” dropdown.

You 8:18 PM

Assign to usr001

watsonx 8:18 PM

All four tasks (1234, 1236, 1240, 1242) have been reassigned to **usr001**. Let me know if there's anything else you'd like to do!

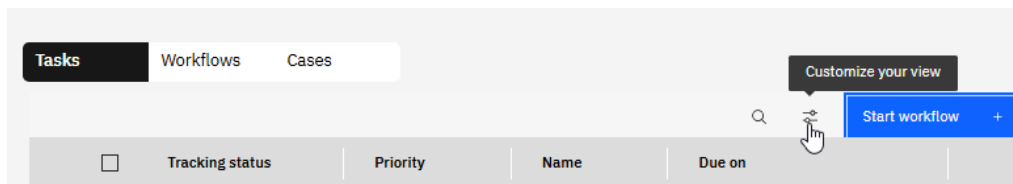

Type something...

2.3 Task Actions

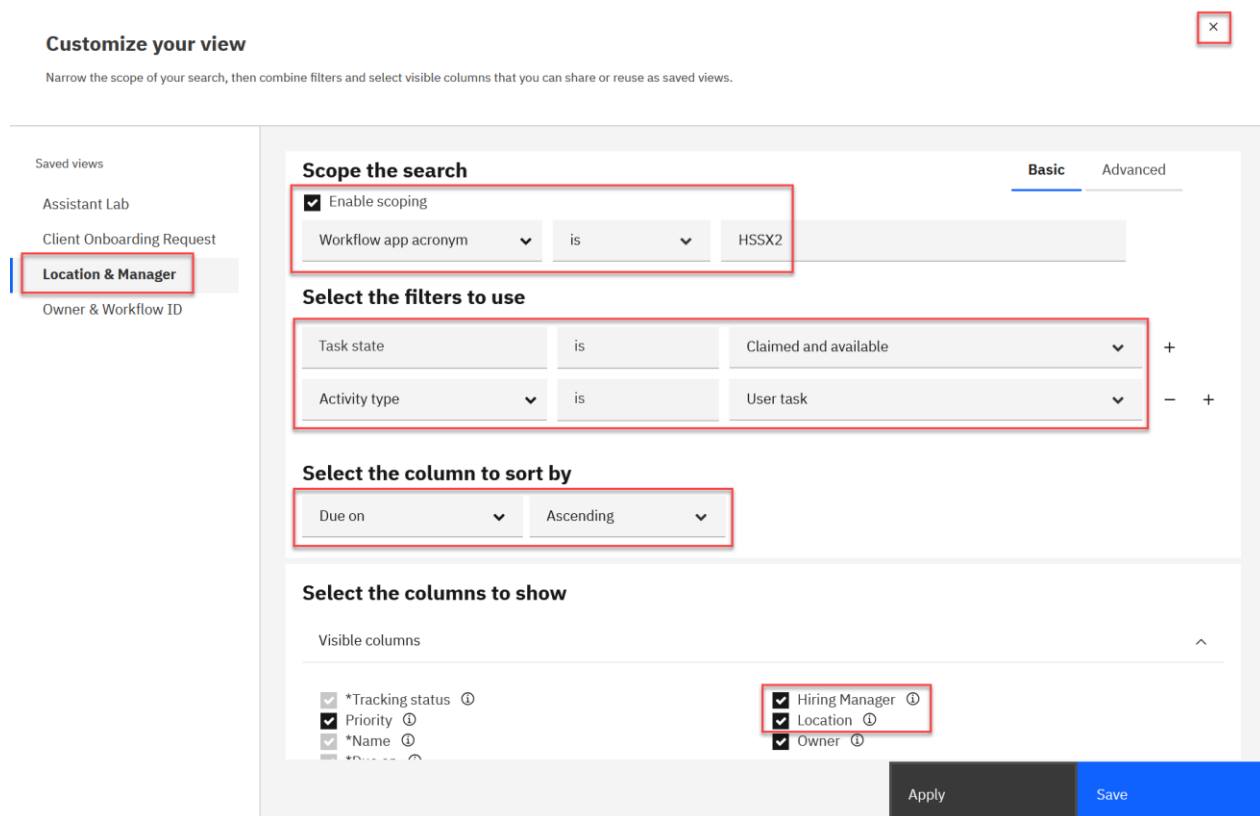

_11. Click on the **dot matrix** in the top right corner and **select Workplace** to switch back to the Workplace Dashboard.

_12. Click the **Customize your view** icon.

_13. **Select Location & Manager** saved view, examine the settings (notice the scoping to the Smart Hiring solution, filters, sort criteria, and the column "Hiring Manager" and "Location" selection).

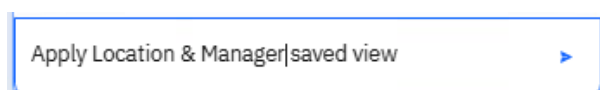

We will ask the Assistant to apply this view.

_14. **Select the Assistant Lab** saved view and **click x** to close the dialog.

_15. In the Assistant's prompt, **type/copy-paste** the text **Apply Location & Manager saved view** and **press Enter**.

■ The name of the saved view needs to be an exact match and it is case sensitive.

You should now see the Location & Manager saved view applied. Note the two new columns and the matching list of tasks in the Assistant.

The screenshot shows the IBM Workplace Assistant interface. A chat window is open on the left, displaying a list of tasks that match the 'Location & Manager' saved view. The chat window includes a 'Close the chat window' button. The main task list on the right has columns for Tracking status, Priority, Name, Due on, Hiring Manager, Location, and Owner. The tasks listed are:

Tracking status	Priority	Name	Due on	Hiring Manager	Location	Owner
Overdue	Normal	Task: GM Approval (ID 1232)	Jul 1, 2025, 10:12:00 PM	Glen Morangie	Chicago	
On track	Normal	Task: Create position request (ID 1230)	Jul 2, 2027, 12:13:00 AM	Glen Morangie	Denver	usr001
On track	Normal	Task: Find job candidates (ID 1242)	Jul 2, 2027, 12:13:00 AM	Laga Vulin	Denver	usr001
On track	Normal	Task: Find job candidates (ID 1238)	Jul 2, 2027, 12:13:00 AM	Johnnie Walker	Denver	usr001
On track	High	Task: Find job candidates (ID 1238)	Jul 2, 2027, 12:13:00 AM	Johnnie Walker	Chicago	usr001
On track	Very high	Task: GM Approval (ID 1242)	Jul 2, 2027, 12:13:00 AM	Laga Vulin	Denver	

_16. Click the **Close** button to close the Assistant window so it no longer covers the Tasks List.

_17. Let's examine the Tasks List.

	Tracking status	Priority	Name	Due on	Hiring Manager	Location	Owner
▼	Overdue	Normal	Task: GM Approval	Jul 1, 2025, 10:12:00 PM	Glen Morangie	Chicago	
▼	On track	Normal	Task: Create position request	Jul 2, 2027, 12:13:00 AM			
▼	On track	Normal	Task: Find job candidates	Jul 2, 2027, 12:13:00 AM	Glen Morangie	Denver	usr001
▼	On track	Normal	Task: Find job candidates	Jul 2, 2027, 12:13:00 AM	Laga Vulin	Denver	usr001
▼	On track	Normal	Task: Find job candidates	Jul 2, 2027, 12:13:00 AM	Johnnie Walker	Denver	usr001
▼	On track	High	Task: Find job candidates	Jul 2, 2027, 12:13:00 AM	Johnnie Walker	Chicago	usr001
▼	On track	Very high	Task: GM Approval	Jul 2, 2027, 12:13:00 AM	Laga Vulin	Denver	

Note that:

- It shows tasks from the started instances of the Smart Hiring process.
- Some tasks have owners. Recall that as the Team Manager, you assigned four tasks to userXXX (where userXXX is the user you are using).
- The business data of the Smart Hiring process is shown: Hiring Manager and Location.

2.3.1 Filter Tasks by Business Data

_18. Click the **IBM Workplace Assistant** icon in the lower right corner to open the Workplace Assistant.

_19. In the Assistant's prompt, **type/copy-paste** the text **Show tasks where HiringManager is Johnnie Walker** and **press Enter**.

Show tasks where HiringManager is Johnnie Walker ▶

Note:

The prompt should use the same name (Hiring Manager with a space) as shown in the "Customize your view", not the process **variable** name: HiringManager (without a space).

Select the columns to show

Visible columns

- ☒ *Tracking status ⓘ
- ☒ Priority ⓘ
- ☒ *Name ⓘ
- ☒ *Due on ⓘ
- ☒ Hiring Manager ⓘ
- ☒ Location ⓘ
- ☒ Owner ⓘ

This is being investigated and will be fixed in the next release.

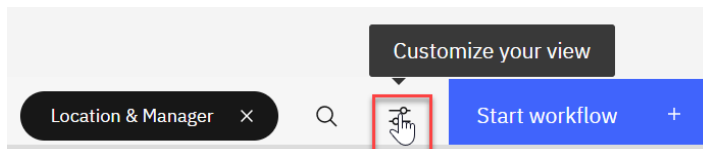

You should still see the *Location & Manager* saved view is applied but the list of tasks is filtered down to those where the Hiring Manager is Johnnie Walker.

Location & Manager

Start workflow

	Tracking status	Priority	Name	Due on	Hiring Manager
▼	On track	Normal	Task: Find job candidates	Jul 2, 2027, 12:13:00 AM	Johnnie Walker
▼	On track	High	Task: Find job candidates	Jul 2, 2027, 12:13:00 AM	Johnnie Walker

_20. Click the **Customize your view** icon.

_21. **Observe** that the Assistant has **added a filter** to your view that reflects your intent.

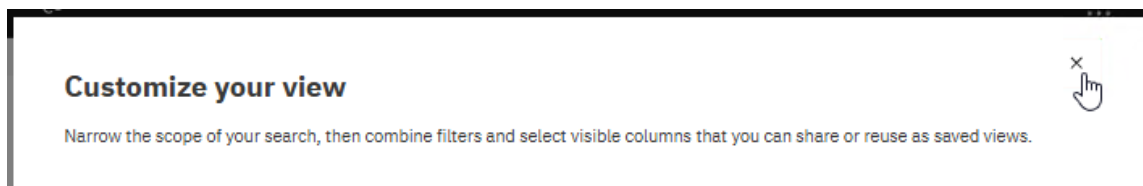

Select the filters to use

Task state	is	Claimed and available	▼	+
Activity type ▼	is	User task ▼	▼	- +
Hiring Manager ▼	is ▼	Johnnie Walker	▼	- +

Without the Assistant's help, you would have to add this filter manually.

Note: The Assistant used the task "business data" to create a filter. Similarly, you could ask the Assistant to use process business data, such as tasks' "tracking status"; for example, you could ask, "Which tasks are at risk?"

_22. Click **X** to close the *Customize your view* window.

2.3.2 Get Task's Summary

_23. Select the **second Task**.

1 item selected				
		Tracking status	Priority	Name
▼	☐	On track	Normal	Task: Find job candidates
▼	☒	On track	High	Task: Find job candidates

_24. In the Assistant's prompt, **type/copy-paste** the text **Get task summary** and **press Enter**.

_25. Click the **dropdown** to the left of the *task selection checkbox* to display the task summary provided by Workplace.

Notice how much more complete and detailed the Agent's task summary is! The Agent's summary complements the data displayed in the Workplace summary and focuses on the business data in the Task, not on the runtime details (e.g., due date) provided in the Workplace summary.

Hiring Manager

Johnnie Walker

Location

Chicago

 watsonx 11:35 AM

Here's a comprehensive overview of the selected task:

The hiring manager for this requisition is **Johnnie Walker**. The position is an **existing** role titled **Head of Product Development**, and the hiring manager is looking for a candidate with **1-2 years of experience**, a **Master of Science in Mathematics (MMath)**, and **Algorithms** listed as a key skill.

The detailed job description (originally drafted for a Python Developer) specifies that the successful candidate will be responsible for writing efficient, testable, and maintainable Python code; collaborating with front-end and back-end developers; participating in code reviews; troubleshooting, debugging, and upgrading existing applications; implementing security and data-protection solutions; and contributing to new feature development. Required qualifications include a bachelor's degree in Computer Science

Task selected: Find job candidates

2.3.3 Prioritize and Open Tasks

If you ask the Assistant to prioritize tasks, the Assistant opens the next most important Task for you. The Assistant prioritizes tasks that you have already claimed first. If you haven't claimed any tasks yet, it automatically claims the next best Task for you.

Note: If AI-based task prioritization (see [Prioritizing Work](#)) is enabled, the Assistant opens your next best Task based on the prediction of the next best task model. In our Workflow environment, we did not enable this feature. Let's see what Workplace Assistant can do for us instead!

You, as the Team Manager, have visibility into all the team's tasks, including those not assigned to you. You want to work only on the tasks assigned to you.

_26. In the Assistant's prompt, **type/copy-paste** the text **Apply Owner & Workflow ID saved view** and **press Enter**.

Apply Owner & Workflow ID saved view

_27. You should now see the tasks that you assigned to yourself (usrXXX), those someone else would have assigned to you, and those visible to you, the team owner, but not yet assigned to anyone.

☐	Tracking status	Priority	Name	Due on	Owner	Workflow ID
▼	☐ Overdue	Normal	Task: GM Approval	Jul 1, 2025, 10:12:00 PM		1078
▼	☐ On track	Normal	Task: Create position request	Jul 2, 2027, 12:13:00 AM		1077
▼	☐ On track	Normal	Task: Find job candidates	Jul 2, 2027, 12:13:00 AM	usr001	1079
▼	☐ On track	Normal	Task: Find job candidates	Jul 2, 2027, 12:13:00 AM	usr001	1082

▼	☐ On track	High	Task: Find job candidates	Jul 2, 2027, 12:13:00 AM	usr001	1083
▼	☐ On track	Very high	Task: GM Approval	Jul 2, 2027, 12:13:00 AM		1081

_28. In the Assistant's prompt, **type/copy-paste** the text **Looking at the tasks assigned to usrXXX, which one should I work on next? Please provide the task's process instance ID and process name** and **press Enter**.

Replace usrXXX with the user you are using.

Looking at the tasks assigned to usr001, which one should I work on next? Please provide the task's process instance ID and process name

_29. **Note the response.** The Agent suggests the task with the highest priority of those tasks that are already assigned to you!

watsonx 12:01 PM

Here's the task you should address next:

– Task ID: 1242

– Process Instance ID: 1083

– Process (instance) name: Smart Hire for Johnnie Walker (Smart Hire Process)

This task carries a **high** priority, making it the most urgent among the items assigned to **usr001**.

Claim

In case the task is not opened, manually open it from the Task List.

_34. You should now see a form open to complete the "Create position request" Task, along with a confirmation from the Assistant.

The screenshot displays the IBM Workplace Assistant interface. On the left, a form titled "Position Request" is visible. It includes a "Requisition number" field with the value "1141". Below this, the "Position data" section contains three fields: "Position type" with the value "New", "Location" with the value "Chicago", and "Hiring manager" with the placeholder "Enter name". At the bottom of the form is a "Job description" field. On the right, a chat window titled "IBM Workplace Assistant" is open. It shows a confirmation message from the assistant: "The **Smart Hire Process** workflow has been successfully started. Let me know if you'd like to view its details, track its progress, or perform any other actions." The message is timestamped "watsonx 12:38 PM". Above the message, there is a button labeled "Start Smart Hire Process". The chat window also shows a timestamp "You 12:38 PM" and a text input field at the bottom with the placeholder "Type something..." and a send button.

2.4.2 Get Assistance in Completing the Task from the Assistant.

Since a Large Language Model (LLM) powers the Workplace Assistant, it can help you complete various kinds of tasks. Specifically, in this scenario, you will ask the Assistant to suggest a compelling "Job description" for a hiring position.

_35. In the Assistant's prompt, **type/copy-paste** the text **Generate a job description for a back-end software engineer with 20 years of C++ experience** and **press Enter**.

Generate a job description for a back-end software engineer with 20 years of C++ experience

Note that the answer is quite verbose and includes several superfluous sections such as Location, Employment Type and What We Offer.

IBM Workplace Assistant

Here's a concise, professional job description you can use for a senior back-end software engineer with extensive C++ expertise:

Job Title: Senior Back-End Software Engineer (C++)

Location: [City, State / Remote]

Employment Type: Full-time, Permanent

Experience Level: 20+ years of professional C++ development

Role Overview

We are seeking a highly seasoned back-end engineer to lead the design, development, and optimization of our core services. You will own critical components that power large-scale, high-performance systems, mentor junior engineers, and drive architectural decisions that ensure reliability, scalability, and security.

Key Responsibilities

- **Architect & Build:** Design and implement high-throughput, low-latency back-end services using modern C++ (C++17/20) and related technologies.
- **Performance Tuning:** Profile, benchmark, and

IBM Workplace Assistant

– Familiarity with cloud platforms (AWS, Azure, GCP) and related services (S3, DynamoDB, Pub/Sub).

– Knowledge of other languages (Python, Go) for scripting or glue code.

– Contributions to open-source C++ projects or publications.

Education

– Bachelor's or Master's degree in Computer Science, Engineering, or a related field (or equivalent professional experience).

What We Offer

- Competitive compensation and performance-based bonuses.
- Comprehensive health, dental, and vision benefits.
- Flexible work arrangements and generous PTO.
- Opportunities to influence product direction and technology stack.
- Continuous learning budget and support for conferences/certifications.

If you're passionate about building high-performance back-end systems and thrive in a collaborative, fast-moving environment, we'd love to hear from you.

Since the Assistant is a React (reason and act) type of Assistant, we can review the answer!

_36. In the Assistant's prompt, **type/copy-paste** the text **Include only the technical information related to the actual job, be factual and concise.** and press Enter.

Include only the technical information related to the actual job, be factual and concise

_37. **Copy** the revised job description into the **Job description** field.

Job description

Senior Back-End Software Engineer (C++ -- 20+ years)

Core Responsibilities

- Design, develop, and maintain high-performance back-end services using modern C++ (C++17/20).
- Optimize code for low latency and high throughput; profile and benchmark with tools such as perf, VTune, or Valgrind.
- Implement robust APIs (gRPC, REST) and integrate with databases, message queues, and cloud services.
- Write thread-safe, concurrent code (std::thread, async, lock-free structures) and manage memory with RAII and smart pointers.
- Conduct code reviews, enforce coding standards, and maintain CI/CD pipelines (Git, CMake/Bazel, Jenkins/GitHub Actions).

Required Technical Skills

- 20+ years professional C++ development, deep knowledge of STL, templates, and modern language features.
- Strong understanding of operating systems, networking (TCP/UDP, sockets), and concurrency primitives.
- Experience with unit/integration testing frameworks (GoogleTest, Catch2) and automated testing.
- Proficiency with version control (Git) and containerization (Docker, Kubernetes).

Preferred Technical Skills

- Micro-service architecture and container orchestration experience.
- Cloud platform familiarity (AWS, Azure, GCP) and related services (e.g., S3, DynamoDB).

2.4.3 Get Assistance in Completing the Task from the Workflow Gen AI Capability

The Smart Hire Process has built-in [Gen AI capability](#) offered in BAW. In our scenario, the Gen AI capability will use the job description information generated by the Workplace Assistant to create a more optimized job description in the specific format required by the workflow.

_38. Click the **Generate** button.

The screenshot shows the 'Position Request' form on the left and the 'IBM Workplace Assistant' chat window on the right. The form includes fields for 'Requisition number' (1141), 'Position data' (Position type: New, Location: Chicago, Hiring manager: Enter name), and 'Job description'. The chat window displays a message from 'watsonx 8:18 AM' with a 'Technical Job Description – Back-End Software Engineer (C++ – 20+ years)' and a list of 'Core Responsibilities' and 'Required Technical Skills'. A 'Generate' button is visible at the bottom of the form.

Job description

Technical Job Description – Back-End Software Engineer (C++ – 20+ years)

Core Responsibilities

- Design, develop, and maintain high-performance back-end services using modern C++ (C++11/14/17/20).
- Implement robust APIs (REST/gRPC) and data pipelines handling high-throughput transactions.
- Optimize code for latency, memory usage, and scalability via profiling (perf, Valgrind) and benchmarking.
- Conduct code reviews, enforce coding standards, and maintain comprehensive unit/integration tests.
- Mentor junior engineers on C++ best practices and system architecture.

Required Technical Skills

- 20+ years professional C++ development (legacy and modern codebases).
- Deep expertise in C++ standards (C++11/14/17/20), STL, Boost, and concurrency primitives.
- Strong knowledge of algorithms, data structures, memory management, and low-level system design.
- Proficiency with Linux/Unix environments, build systems (CMake, Bazel), and Git.
- Experience with high-performance networking, multithreaded programming, and profiling tools.
- Ability to design and integrate with databases (SQL/NoSQL) and message queues (Kafka, RabbitMQ).

Preferred Technical Experience

Generate

_39. Verify that the **Job description** looks similar to this.

The screenshot shows the 'Job description' field with a generated job description for a 'SENIOR BACK-END SOFTWARE ENGINEER'. The text describes the role, key responsibilities, and required skills.

Job description

SENIOR BACK-END SOFTWARE ENGINEER

[Company Name] is seeking an experienced Senior Back-End Software Engineer to join our team and lead the design, development, and ongoing support of high-performance back-end systems. The ideal candidate will have profound expertise in modern C++ (C++11/14/17/20) and a track record of building scalable, low-latency services. The role will involve:

Key Responsibilities:

- Design and develop scalable back-end components using modern C++ standards.
- Optimize existing code to achieve maximum efficiency and reliability.
- Implement secure, resilient APIs and integrate with various data stores and services.
- Analyze and resolve performance bottlenecks, ensuring high system availability.
- Lead technical discussions and mentor junior engineers.

Required Skills:

- Minimum 5 years of professional experience in C++ programming.
- Deep knowledge of the Standard Template Library (STL), templates, concurrency patterns, and modern language features.
- Strong background in operating systems, networking, and low-level programming concepts.

This concludes the “Use the IBM Workplace Assistant to Work with Processes and Tasks in IBM Business Automation Workflow” lab.

Congratulations on completing the lab!
