NOTICES

This information was developed for products and services offered in the USA.

IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not grant you any license to these patents. You can send license inquiries, in writing, to:

IBM Director of Licensing
IBM Corporation
North Castle Drive, MD-NC119
Armonk, NY 10504-1785
United States of America

The following paragraph does not apply to the United Kingdom or any other country where such provisions are inconsistent with local law: INTERNATIONAL BUSINESS MACHINES CORPORATION PROVIDES THIS PUBLICATION "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Some states do not allow disclaimer of express or implied warranties in certain transactions, therefore, this statement may not apply to you.

This information could include technical inaccuracies or typographical errors. Changes are periodically made to the information herein; these changes will be incorporated in new editions of the publication. IBM may make improvements and/or changes in the product(s) and/or the program(s) described in this publication at any time without notice.

Any references in this information to non-IBM websites are provided for convenience only and do not in any manner serve as an endorsement of those websites. The materials at those websites are not part of the materials for this IBM product and use of those websites is at your own risk.

IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any obligation to you.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

TRADEMARKS

IBM, the IBM logo, and ibm.com are trademarks or registered trademarks of International Business Machines Corp., registered in many jurisdictions worldwide. Other product and service names might be trademarks of IBM or other companies. A current list of IBM trademarks is available on the web at "Copyright and trademark information" at www.ibm.com/legal/copytrade.shtml.

Adobe, the Adobe logo, PostScript, and the PostScript logo are either registered trademarks or trademarks of Adobe Systems Incorporated in the United States, and/or other countries.

Cell Broadband Engine is a trademark of Sony Computer Entertainment, Inc. in the United States, other countries, or both and is used under license therefrom.

Intel, Intel logo, Intel Inside, Intel Inside logo, Intel Centrino, Intel Centrino logo, Celeron, Intel Xeon, Intel SpeedStep, Itanium, and Pentium are trademarks or registered trademarks of Intel Corporation or its subsidiaries in the United States and other countries.

IT Infrastructure Library is a Registered Trade Mark of AXELOS Limited.

ITIL is a Registered Trade Mark of AXELOS Limited.

Java and all Java-based trademarks and logos are trademarks or registered trademarks of Oracle and/or its affiliates.

Linear Tape-Open, LTO, the LTO Logo, Ultrium, and the Ultrium logo are trademarks of HP, IBM Corp. and Quantum in the U.S. and other countries.

Linux is a registered trademark of Linus Torvalds in the United States, other countries, or both.

Microsoft, Windows, Windows NT, and the Windows logo are trademarks of Microsoft Corporation in the United States, other countries, or both.

UNIX is a registered trademark of The Open Group in the United States and other countries.

1 Lab Introduction

This hands-on lab explores how Generative AI (Gen AI) can be used within IBM Business Automation Workflow (BAW) to streamline business processes and improve decision-making. Participants will gain practical experience integrating Gen AI capabilities into workflows to automate content creation, enhance decision logic, and optimize task management. In this lab, attendees will learn how to leverage AI-powered intelligent documents within IBM BAW.

1.1 Lab Scenario

Documents such as utility bills or bank statements are widely used as proof of address but are generally considered secondary documents for identity verification.

Figure 1. Client Onboarding Case: Review Documents Process

In this lab, you will create an automation that uses an LLM to help the client onboarding specialist identify client documents and provide proof of residence. The LLM will automatically classify and summarize the documents.

In this activity, a client onboarding specialist must review and validate client documents. In this lab, you will complete a partially implemented Human Task Activity (highlighted in green in the figure below) as part of the Client Onboarding Process.

1.2 Lab Setup Instructions

If you are performing this lab as a part of an **IBM event**, access the document that lists the available systems and URLs along with login instructions. For this lab, you will need to access **IBM Business Automation Studio**.

If you are performing this lab **self-paced** in an environment, which has been enabled for the Client Onboarding labs, you can find the URL and user information in the **ConfigMap “000-client-onboarding-information”** of the IBM Cloud Pack for Automation project in the OpenShift Web Console.

Download the four PDF documents as shown below from the **Lab Data** folder in GitHub to a local folder of your choice.

-  Banking Information - Automation Elite Inc.pdf
-  Legacy Consulting - Banking Information.pdf
-  Legacy Consulting Annual Report.pdf
-  Utility Bill - Automation Elite Inc.pdf

2 Lab Instructions

2.1 Preparation

_1. In your browser, **login** to **IBM Business Automation Studio** using the **Enterprise LDAP** option.

Log in

Log in with

Enterprise LDAP

Username

Password

Log in

The homepage contains cards that showcase recent artifacts across all installed Cloud Paks in the system. For IBM Cloud Pak for Business Automation, the recent [business applications](#) and [automation services](#) are shown.

Client Onboarding Document Upload 02/03/2026

View all

_2. In the top-left corner, **click** on the **Hamburger menu** icon and select **Design → Business automations** to access the automation repository.

This brings up the Business automations page where you can create or reuse automations from different capabilities of IBM Cloud Pak for Business Automation. If a capability is not installed in the environment, it will be greyed out.

_3. Click on Workflow to display all available Workflow solutions.

_4. Find the Workflow solution Doc Recognition or click the magnifying glass icon in the top right corner and enter Doc Re to filter all Workflow Solutions down to only this solution.

In a multi-user environment you might find other solutions containing Doc Recognition, for example prefixed with usrXXX.

In case you have previously done the lab “Use AI Agent to Validate Banking Information”, you can skip steps _5 - _8 and directly continue with step _9.

_5. Click on the tile of the Doc Recognition solution but not the Open link.

_6. Click on the three vertical docs at the right end of the single version that exists (the version number may differ from the one in the screenshot) and click Copy.

This will create a copy of the Doc Recognition solution with Copy appended to the original name.

7. Click on the **tile** (but not the Open link), then click on the **three vertical dots** next to the blue Open button and **select Update details**.

8. **Modify** the **Name** of the solution to **UsrXXX Doc Recognition** and the **Description** to **Doc Recognition for UsrXXX** (replacing it with the name of the user you are using) before **clicking Save**.

Keep the Acronym as is, independent of the value. This is auto generated to be unique and may differ from the screenshot.

9. Click on the blue **Open button** to open the solution in Workflow Designer.

2.2 Author the Gen AI Service Flow

You will author a Gen AI activity to assist the client onboarding specialist in identifying client documents and providing proof of residence. The Gen AI activity will use an LLM to classify and summarize the client-supplied documents.

For example, given a utility bill, the Gen AI activity using an LLM will classify and summarize it as shown below.

Digital Document	Verification and Summarization by Gen AI
	This document is a Bill. Summary: * Company: Automation Elite * Address: 3974 Carson St, Lansing, MI 48911 * Dates: + Bill Period: 04-01-2022 - 05-01-2022 + Bill Due On: 05-05-2022

The Gen AI activity you'll create will use a one-shot prompt (no training) to summarize and classify three document types: Utility Bills, Bank Statements, and Annual Reports.

2.2.1 Create Service Flow

You will create a Service flow that, given text extracted from a digital document, classifies and summarizes it.

Note that we have already created a solution Service flow for you. You can use it as a reference.

	External service	1
	Services	
	Events	
	Teams	
	External service	1
	extractText	
	Service flow	3
	ExtractDocText	
	VerifyDoc	>
	VerifyDocAgentic	

_10. Click the + icon next to **Services**.

_11. Click **Service flow**.

_12. Enter **My VerifyDoc** and click **Finish**.

2.2.2 Add a Gen AI Activity

_13. Click the **Activity** palette.

_14. Select the **Generative AI** activity.

_15. While holding the left mouse button, **drag and drop** it **onto** the **wire** between the Start and End nodes.

Ensure the Gen AI Task AI Activity has been added as shown below:

2.2.3 Create Service Flow Variables

_16. Click the **Variables** tab.

_17. Click the **+** icon on the input.

_18. For **Name**, enter **fileContentText**.

_19. Click the **+** icon on the *output*.

_20. For **Name**, enter **generatedText**.

2.2.4 Author the Gen AI Activity

_21. Click the **Gen AI** tab.

_22. Click **Gen AI Task**.

_23. **Capture the divider and drag** it to the **left** to expand the Gen AI Editor.

2.2.5 Select the LLM

IBM Business Automation Workflow is connected to an IBM watsonx.ai instance, which provides a selection of LLMs.

24. From the Large language model dropdown, **select meta-llama/llama-4-maverick-17b-128e-instruct-fp8**.

Verify that the **meta-llama/llama-4-maverick-17b-128e-instruct-fp8** is your LLM.

Large language model

meta-llama/llama-4-maverick-17b-128e-instruct-fp8

Which LLM to choose?

It is important to choose the right LLM for a given task. Using a multimodal instruction-tuned LLM that can process both text and images is important when doing document recognition and data extraction. Depending on the length of the documents to be handled, the supports long-context reasoning (number of max tokens) is also relevant.

In this lab, to conserve precious tokens, we will not provide raw images or long texts as input to the model. Instead, we will first extract text from the image and directly use it as the input.

2.2.6 Create Prompt Input Variable

The input variable will provide the LLM with the text extracted from the PDF file as shown in the example below.

Legacy Consulting
Annual Report 2024

Company Overview

Legacy Consulting Incorporation was founded in January 2006. As of December 31, 2024, the company is 18 years old. Legacy Consulting has grown to become a leading provider of management consulting services, helping businesses navigate complex challenges and achieve their strategic objectives.

Key Highlights:

Age of the Company: 18 years and Number of Employees: As of December 31, 2024, Legacy Consulting has 550 employees, representing a 10% increase from 500 employees as of December 31, 2023. - **Annual Revenue:** The annual revenue for the year ending December 31, 2024, is \$10 million, up from \$8 million for the year ended December 31, 2023, representing a 20% year-over-year growth.

Financial Highlights:

Year-over-Year Financial Changes

Category	2024	2023	Change	% Change
Revenue	\$10 million	\$8 million	+\$2 million	+25.0%
Net Income	\$1.5 million	\$1.2 million	+\$0.3 million	+25.0%
Earnings Per Share	\$2.75	\$2.00	+\$0.75	+37.5%
Total Assets	\$25 million	\$22 million	+\$3 million	+13.6%
Total Liabilities	\$5 million	\$6 million	-\$1 million	-16.7%
Equity	\$15 million	\$13 million	+\$2 million	+15.4%

Legacy Consulting
Annual Report 2024

Company Overview

Legacy Consulting Incorporation was founded in January 2006. As of December 31, 2024, the company is 18 years old. Legacy Consulting has grown to become a leading provider of management consulting services, helping businesses navigate complex challenges and achieve their strategic objectives.

Key Highlights:

Age of the Company: 18 years and Number of Employees: As of December 31, 2024, Legacy Consulting has 550 employees, representing a 10% increase from 500 employees as of December 31, 2023. - **Annual Revenue:** The annual revenue for the year ending December 31, 2024, is \$10 million, up from \$8 million for the year ended December 31, 2023, representing a 20% year-over-year growth.

Financial Highlights:

Year-over-Year Financial Changes

Category 2024 2023 Change % Change

Revenue \$10 million \$8 million +\$2 million +25.0%

Net Income \$1.5 million \$1.2 million +\$0.3 million +25.0%

Earnings Per Share \$2.75 \$2.00 +\$0.75 +37.5%

Total Assets \$25 million \$22 million +\$3 million +13.6%

Total Liabilities \$5 million \$6 million -\$1 million -16.7%

Equity \$15 million \$13 million +\$2 million +15.4%

You will define the input the LLM will receive every time you call this Service Flow.

25. Click the Add variables + button in the Variables section.

Variables
Add variables that you can use in your prompt.

No variables

Select and add variables to use in your prompt.

Add variables +

26. Add the fileContentText variable in the Add variables dialog by clicking on the Select the variables to add dropdown and then checking the fileContentText variable. Finally, click Add.

Add variables

Add variables that you can use in your prompt.

Select the variables to add

- ☒ fileContentText
- ☐ generatedText

No variables selected

Select and add variables to use in your prompt.

Cancel Add

_27. In the **Input** section of the **Prompt** definition, click the **+** (Add variable) button.

Prompt

Create a prompt to ask the selected large language model to analyze content or generate output in the context of your prompt.

_28. Select the variable **fileContentText**.

You should now see that the input to the LLM is the *fileContentText* variable you will pass to this Service Flow.

Input

_29. In the **Value** column, enter the following **text** for the **fileContentText** variable.

Banking Information Focus Corp This banking information provided here will be used by Focus Corp to withdraw the monthly services fee. Client Name Automation Elite Inc. Bank Name The Digital Bank Bank Phone Number +1-289-333-1234 Bank Address 2190 New Orchard Road, Armonk, New York - 10504 Routing Number 91373084 Account Number 1179476345 Account Type Checking Savings Other By submitting this form, you authorize Focus Corp to withdraw the monthly services fee from he specified bank account. Date 4/21/2021

Variable	Value ⓘ
fileContentText	he monthly services fee from he specified bank account. Date 4/21/2021

2.2.7 Define Prompt Context

You will define a prompt to instruct the LLM to categorize and summarize a document.

Surprisingly, you will discover that the context definition above is all we will need to enable the LLM to extract data from the documents. No training examples are needed!

_30. In the **Context** section of the **Prompt** definition, add the text below.

Identify the document as Bill, Banking Information, or Annual Report.
Provide a summary of the document, including only the company names with the type of company, addresses for the companies when existing, and dates.
Do not include any amounts.

Prompt

Create a prompt to ask the selected large language model to an:

Context

Provide instructions and context to your prompt.
Insert variables in your context to use values dynamically.

The Context section should look exactly as shown below.

Context

Identify the document as Bill, Banking Information, or Annual Report.
Provide a summary of the document, including only the company names with the type of company, addresses for the companies when existing, and dates.
Do not include any amounts.

2.2.8 Define Parameters

To limit the length of the generated output, we can specify the minimum and maximum number of tokens that the LLM can generate in the Parameters pane. In our case, we will need more than the default 50 tokens.

What is a token?

A token is a sequence of characters that holds semantic meaning for a model. Before LLM processing, the words in your prompt text are converted into tokens. Similarly, the model's raw output is also in token form. These output tokens are then converted back into words to be displayed as the final result.

Each LLM has a maximum limit on the total number of tokens, including both the tokens in the input prompt and those in the generated output. You can view those limits in the LLM descriptions in the Large Language Model dropdown menu. For more information about tokens, see [Tokens and tokenization](#)

31. In the **Parameters** section, for **Maximum generated tokens**, enter **250**.

Parameters ⓘ

Constrain the length of the generated output.

Minimum generated tokens

1

Maximum generated tokens

250

2.2.9 Test the Gen AI Task

We can use the default value for the input quote variable to test our Gen AI Task.

Variable	Value ⓘ
fileContentText	he monthly services fee from he specified bank account. Date 4/21/2021

_32. Click the **Generate** button.

Parameters ⓘ

Constrain the length of the generated output.

Generate

RAW

You should now see that the document has been correctly identified and labeled as "Banking Information," with the document summary included below.

Generate

RAW

Generated output

>

The document is identified as: Banking Information

Summary:

- Company Names and Types:
 - Focus Corp (Company)
 - Automation Elite Inc. (Client/Company)
 - The Digital Bank (Bank)
- Addresses:
 - The Digital Bank: 2190 New Orchard Road, Armonk, New York - 10504
- Dates:
 - 4/21/2021<|eot_id|>

92 tokens generated in 1.129s. Stop sequence: eos_token

Save as example

Note the **Save as example** button. If you decide to train the model with a set of documents (multi-shot prompt), you can use it to add this run to the training example section. Also note that 92 tokens were generated, which is why we increased the maximum generated tokens to 250.

The output you receive might differ from the above as may be the number of tokens generated.

2.2.10 Map the Gen AI Task Activity to Service Flow Variables

We will map the Gen AI Task output variables to the Service Flow's output variables. This will allow the caller of the Service Flow to interact with the Gen AI Task.

Note that we do not need to map the input variable **fileContentText** explicitly because it has already been associated as input to the Gen AI Task in the Gen AI Editor.

_33. Click the **Diagram** tab.

_34. Select the **Gen AI Task** activity.

_35. Click the **Data Mapping** tab.

The screenshot shows the 'Data Mapping' tab selected in the left sidebar. The main area displays the 'Common' section with fields for 'Name' (Gen AI Task), 'Color' (a row of color swatches), and 'Documentation'.

_36. On the **Generated text (string)** variable, click the **variable picker icon**.

The screenshot shows the 'Output mapping' section. The 'Generated text (String)' variable is selected, and the variable picker icon (a small icon with a plus sign) is highlighted with a mouse cursor.

_37. Select **generatedText**.

The screenshot shows the variable picker dropdown. The 'generatedText (String)' variable is selected and highlighted with a mouse cursor.

_38. Click the **Magic Wand** icon.

The screenshot shows the 'Output mapping' section. The 'Generated text (String)' variable is selected, and the Magic Wand icon (a small icon with a wand) is highlighted with a mouse cursor.

_39. **Deselect** the **Generated text** variable and **click Finish**.

The screenshot shows the 'Variable creation' dialog box. The 'Generatedtext' variable is deselected (checkbox is unchecked). The 'Generatedtokencount', 'Inputtokencount', and 'Stopreason' variables are selected (checkboxes are checked). The 'Finish' button is highlighted with a mouse cursor.

Variable name	Variable type	Input	Output
☐ Generatedtext	String	☐	☐
☒ Generatedtokencount	Integer	☐	☐
☒ Inputtokencount	Integer	☐	☐
☒ Stopreason	String	☐	☐

This action will create private variables to map the Gen AI Task variables. We can use private variables because they don't need to be mapped as the Service Flow's output. Users of the Service Flow are not interested in the LLM's internal workings!

_40. Click the **Finish editing** icon to ensure that all your work is saved.

2.3 Add the “Gen AI Service” Flow to a Human Task

The Gen AI Service Flow (My VerifyDoc) you just authored is intended for use in the Human Task invoked from a process that supports a client onboarding specialist on identifying client documents provided as proof of residence.

In this lab, we have partially authored the Human Activity “*My Document Identification and Validation*” (the official term is Client-side Human Service, or CSHS) for you. Your task is to add and configure the “My VerifyDoc” Service flow that you have just authored.

2.3.1 Examine the "My Document Identification and Validation" CSHS

_41. Click **User interface**, and then click **My Document Identification and Validation**.

_42. Click the **Run** button.

43. Click the **Open Document** button, select **Banking Information – Automation Elite Inc.pdf**, in the folder you have saved the documents from the lab data to and click **Open**.

Focus Corp

Client Onboarding Document Identification and Validation

1. Upload Client Document

2. Extract Text from Client Document

44. Click the **Extract Text** button to extract text from the PDF document.

For the purpose of this lab, a Java library is used to extract the text from the PDF.

Document Contents:

Banking Information Focus Corp

This banking information provided here will be used by Focus Corp to withdraw the monthly services fee.

Client Name
Automation Elite Inc.

Bank Name
The Digital Bank

Bank Phone Number
+1-289-333-1234

Bank Address
2190 New Orchard Road, Armonk, New York - 10504

Routing Number
91373084

Account Number
1179476345

Account Type
☒ Checking ☐ Savings ☐ Other

By submitting this form, you authorize Focus Corp to withdraw the monthly services fee from the specified bank account.

Date
4/21/2021

>|E Extract Text

_45. Click the **Generate Summary** button and note that nothing happens.

Gen AI Generated Document Summary:

In the next steps, you will configure the Client-side Human Service UI to send the document text to the Gen AI Service Flow you created and display the document classification and summary.

_46. **Close** the browser **window or tab**.

2.3.2 Add the “My VerifyDoc” Service Flow

_47. Click the **Diagram** tab if it is not already selected.

_48. Click **Services**, then **drag and drop My VerifyDoc** onto the diagram.

Verify that the Diagram now includes the **My VerifyDoc** activity that invokes the respective Service Flow you dragged.

_49. **Hover** over the bottom right boundary of the **Coach** activity – you should see a connecting arrow as shown below.

_50. While holding down the left mouse button on the connecting arrow, **make a connection** to **My VerifyDoc** activity.

_51. **Connect** the **My VerifyDoc** activity to **Stay on Page**. Use the method described in the previous steps.

This connection ensures that after you execute the *My VerifyDoc* activity, control returns to the UI.

2.3.3 Associate "Generate Summary" Button with "My VerifyDoc" Service Flow

By default, the Generate Summary Button in the Coach was not associated with My VerifyDoc Service Flow. Instead note that the element in the Coach that got automatically associated with the *My VerifyDoc* activity is the element called Image.

Note that the UI element called Image is the Focus Corp logo!

We don't want the Gen AI service to start when we click the logo image.

_52. Click the Image link.

_53. Click the **General** tab.

_54. Click the **Select...** button.

_55. Select the **Generate Summary** button and click **Finish**.

_56. Verify the link is now associated with the **Generate Summary** button.

2.3.4 Map the "My VerifyDoc" Service Flow Interface

Before we perform variable mapping, let's examine the figure below to understand the flow and the variables involved.

Figure 2. Service Flows and Variables

_57. Click the **My VerifyDoc** activity.

_58. Click the **Data mapping** tab.

_69. Click the **Edit input mapping** button to open the Mapping Editor.

_60. Click the **Select a variable** link.

_61. Select the **FileContentTextOutput** variable.

_62. Click the **Output mapping** tab.

_63. Click the **Select a variable** link.

_64. Select the **genAIExtractedContent** variable.

_65. Click **OK** to close the Mapping Editor.

_66. Click the **Finish editing** icon to ensure that all your work is saved.

2.4 Test the "My Document Identification and Validation" CSHS

_67. Click the **Run** button.

_68. Click the **Open Document** button.

_69. Click the **Open Document** button, select **Utility Bill - Automation Elite Inc.pdf**, in the folder you have saved the documents from the lab data to and **click Open**.

_70. Verify that the **document image** appears as shown below:

1. Upload Client Document

Document Image:

Open Document

_71. Click the **Extract Text** button.

_72. Verify that the **extracted text** appears as shown below.

2. Extract Text from Client Document

Document Contents:

_73. Click the **Generate Summary** button.

_74. **Verify** that the **AI-generated output** appears similar as shown below.

3. Generate Client Document Summary

Gen AI Generated Document Summary:

_75. If you like, repeat steps _68 - _74 to try the other three documents.

 Banking Information - Automation Elite Inc.pdf

 Legacy Consulting - Banking Information.pdf

 Legacy Consulting Annual Report.pdf

This concludes the “Use Gen AI to Identify and Validate Documents” lab.

Congratulations on completing the lab!
